Subject: Additional Chlorine Sampling for Cochiti Lake Distribution

Kenny, enjoyed talking with you today.

Before EPA Region 6 can allow the (BWA) Boil Water Advisory to be lifted we are requesting five (5) chlorine level samples from distribution. This additional sampling will insure acceptable Cl levels in the water provided to the residents.

The locations that are best to be sampled for are:

- Site 1 New Visitors Center (farthest southern point)
- Site 2 Golf course kitchen (farthest northern point)
- Site 3 Center of Town
- Site 4 Farthest western site
- Site 5 Location North of Well # 1

Please provide the Cl results to us along with a detailed description of each sample site. Your continued efforts and commitment to address water quality issues along with correcting Well #1 and Well # 2 significant deficiencies are greatly appreciated. Please call if you have any question or concerns.

Regards, John
